About us

Lucia Munoz Salas is a Power Platform Developer passionate about technology and innovation, specializing in Microsoft Power Platform. She automates processes with Low-Code, RPA, and AI, builds custom apps, and simplifies data to support decision-making. Driven by problem-solving, she enjoys finding creative solutions that improve the way teams work.

Samantha Cruz is a Senior Data Engineer at isolutions AG, she builds scalable pipelines, real-time analytics, and end-to-end data platforms using Microsoft Fabric and Databricks with a focus on efficiency and governance. As a speaker and mentor, she makes complex data concepts accessible.

Lost in the Middle: How Language Models Use Long Contexts

Nelson F. Liu, Kevin Lin, John Hewitt, Ashwin Paranjape, Michele Bevilacqua, Fabio Petroni, Percy Liang

While recent language models have the ability to take long contexts as input, relatively little is known about how well they
of language models on two tasks that require identifying relevant information in their input contexts: multi-document que

Chain-of-Thought Prompting Elicits Reasoning in Large Language Models

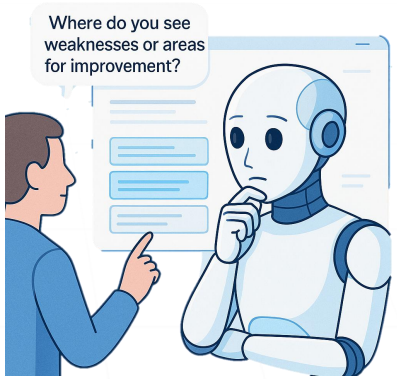

Jason Wei, Xuezhi Wang, Dale Schuurmans, Maarten Bosma, Brian Ichter, Fei Xia, Ed Chi, Quoc Le, Denny Zhou

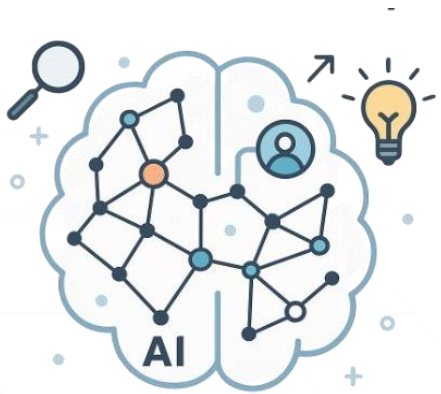

We explore how generating a chain of thought -- a series of intermediate reasoning steps -- significantly improves the ability of large language models to perfo
complex reasoning. In particular, we show how such reasoning abilities emerge naturally in sufficiently large language models via a simple method called chain
prompting, where a few chain of thought demonstrations are provided as exemplars in prompting. Experiments on three large language models show that chain
thought prompting improves performance on a range of arithmetic, commonsense, and symbolic reasoning tasks. The empirical gains can be striking. For instan
prompting a 540B-parameter language model with just eight chain of thought exemplars achieves state of the art accuracy on the GSM8K benchmark of math w
problems, surpassing even finetuned GPT-3 with a verifier.

Assumptions
Challenge

AI

Strategy 1: Stop Typing, Start Talking

- Speaking provides **natural context.**
- **Explain the "Why"** of the task.

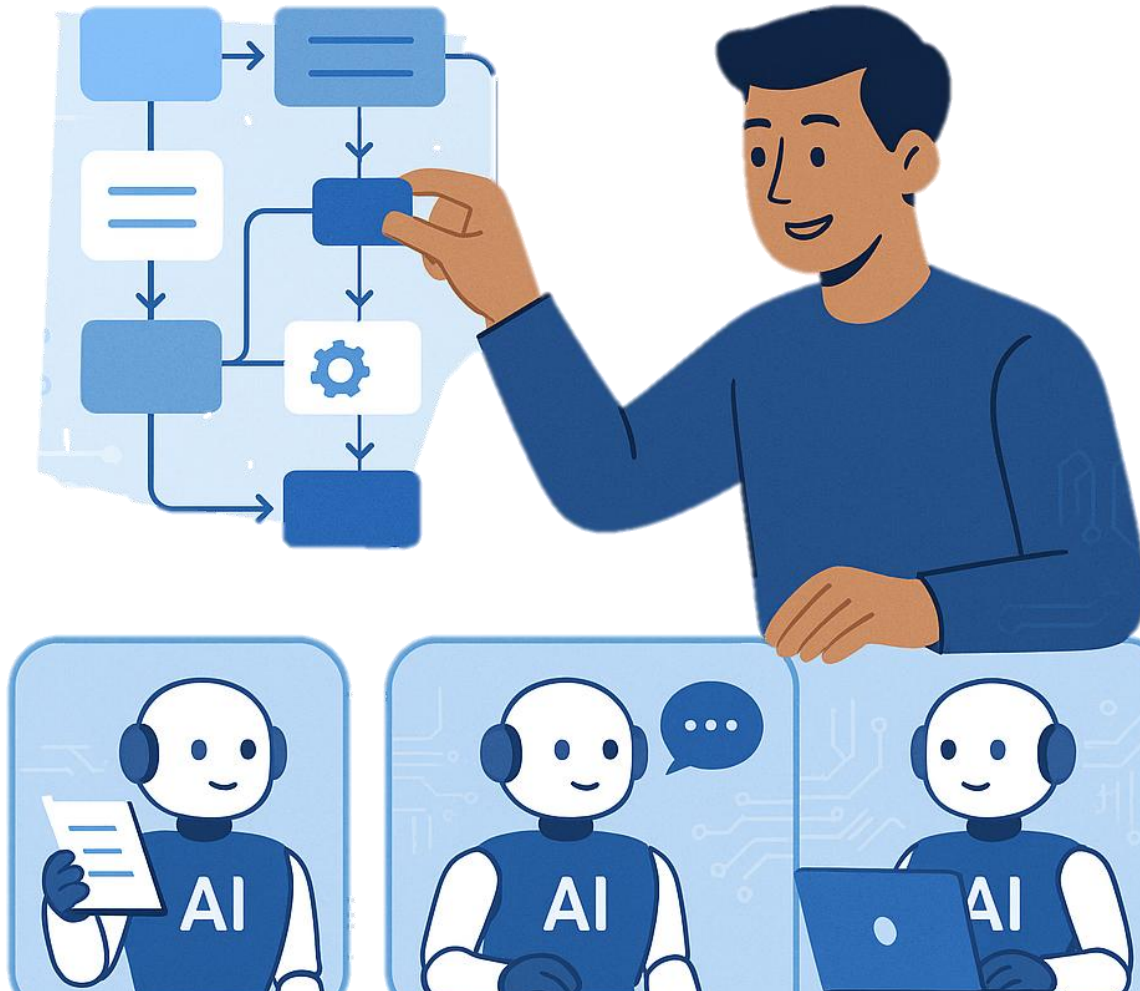

Prompt Engineering Patterns
Context Window

Strategy 2: Create Systems, Not Searches

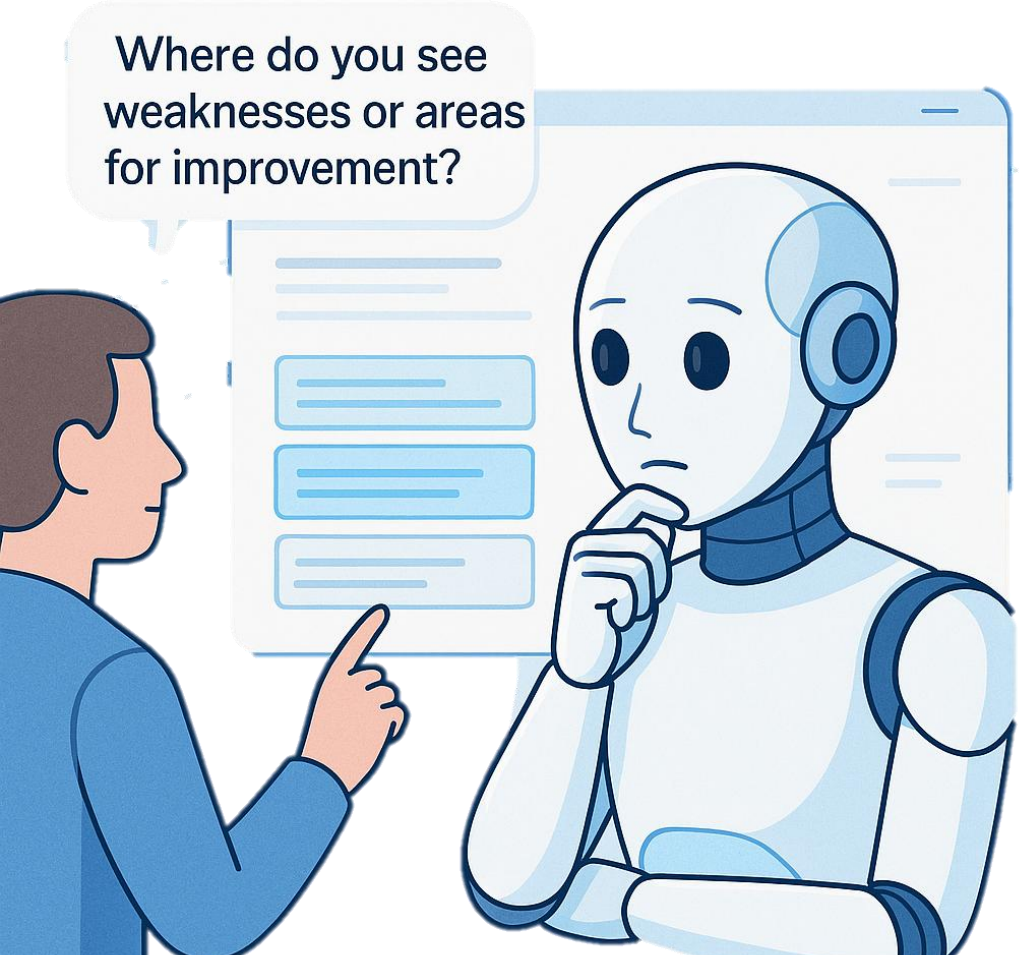

1. **Build AI Assistants**
   Customized for recurring tasks

2. **Meta-Trick**
   Ask AI to help build these systems

3. **Personal Team**
   Specialists that know how you work

Strategy 3: Make It Think Before You Correct

AI often surpasses its initial response when prompted to self-reflect

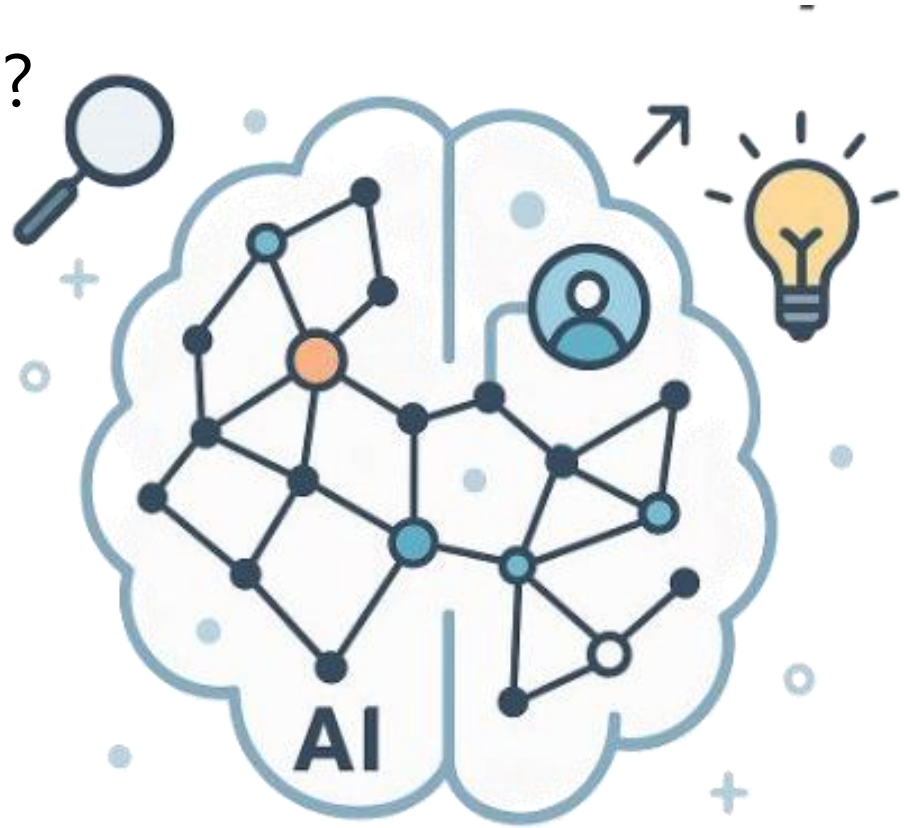

Prompt Engineering Patterns

Self-Critique & Reflection

Strategy 4: Activate Memory

What patterns do you see in my challenges?

What blind spots might I have?

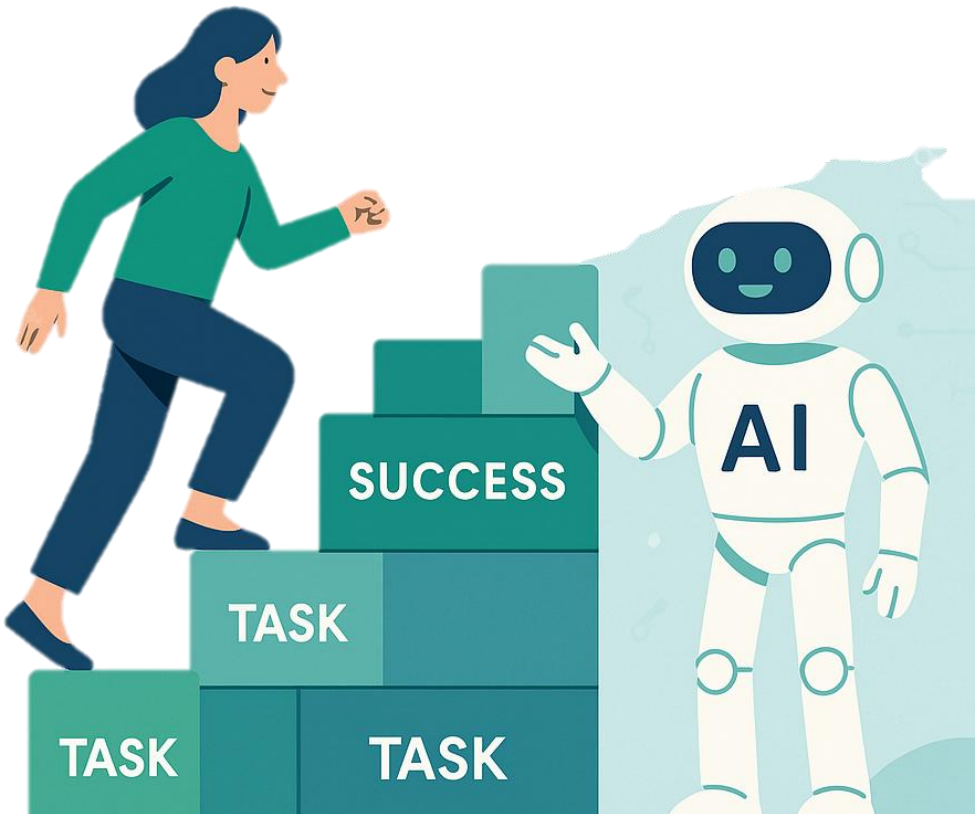

Prompt Engineering Patterns
Multi-turn Prompting

Strategy 5: Build on Success

Start with your wins

Scale what already works

Decode success patterns

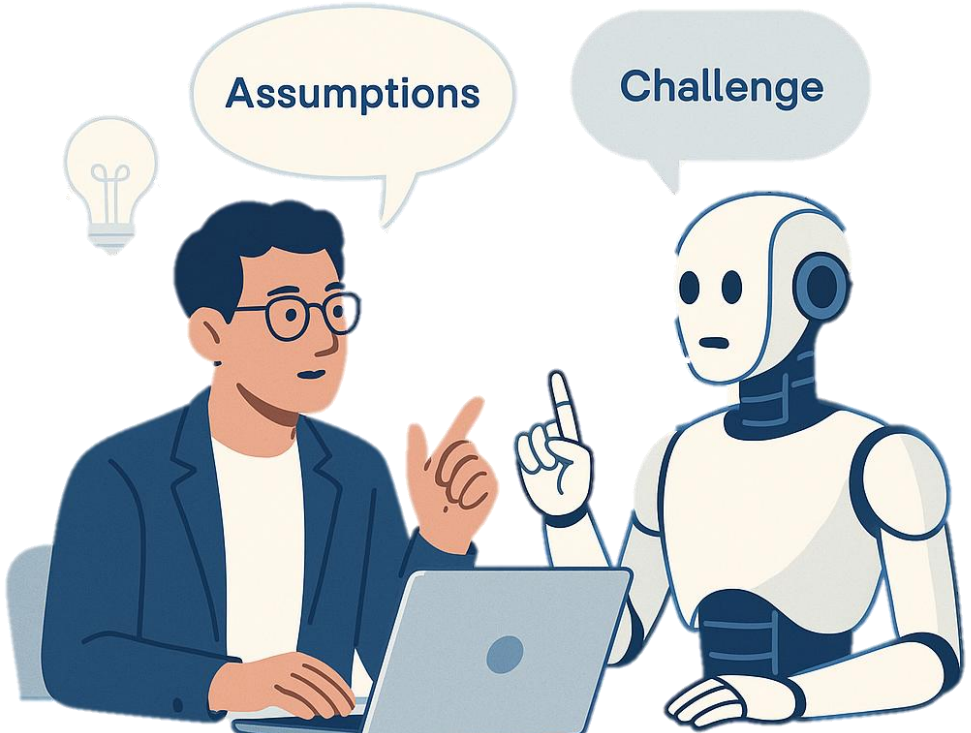

Prompt Engineering Patterns

- Zero-shot vs few-shot

Strategy 6: Think Strategically

"Don't just agree with me. Be critical.
Push back on my assumptions."

Prompt Engineering Patterns

Self-Critique & Reflection

Strategy 7: Explore Boundaries

"What's a capability you have that most people don't know about?"

From Understanding to Building

Stop seeing AI as just a chatbot

Start seeing it as a building partner

What could AI help you rethink and build together?

AI Tools

AI Note-Takers:

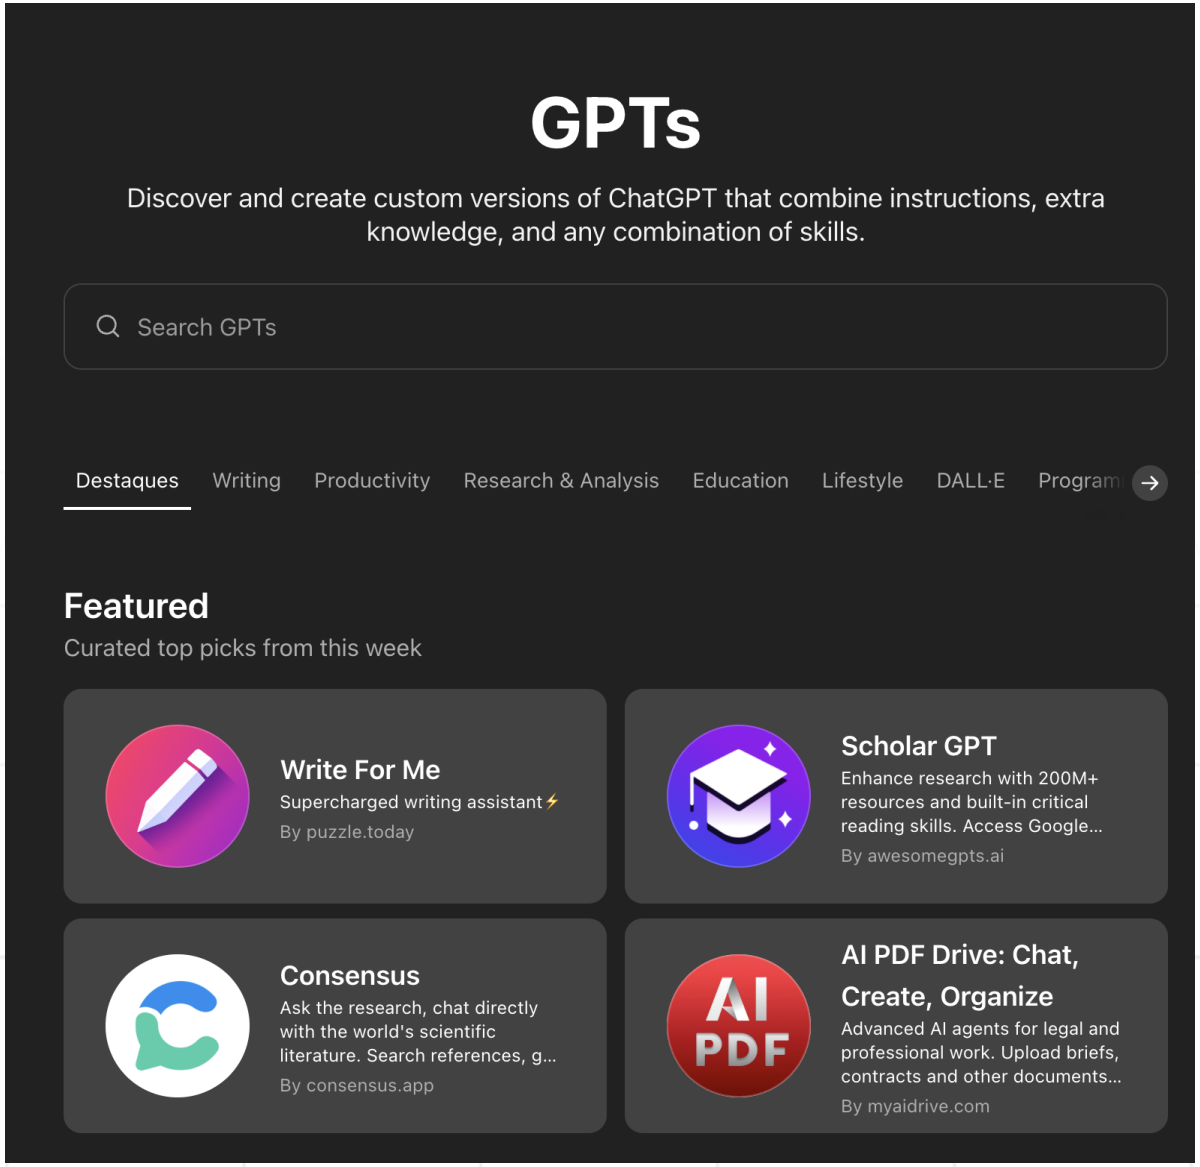

Meetings summaries, action items, translated captions and more.

Real Use Cases

Copilot Chatbot with RAG

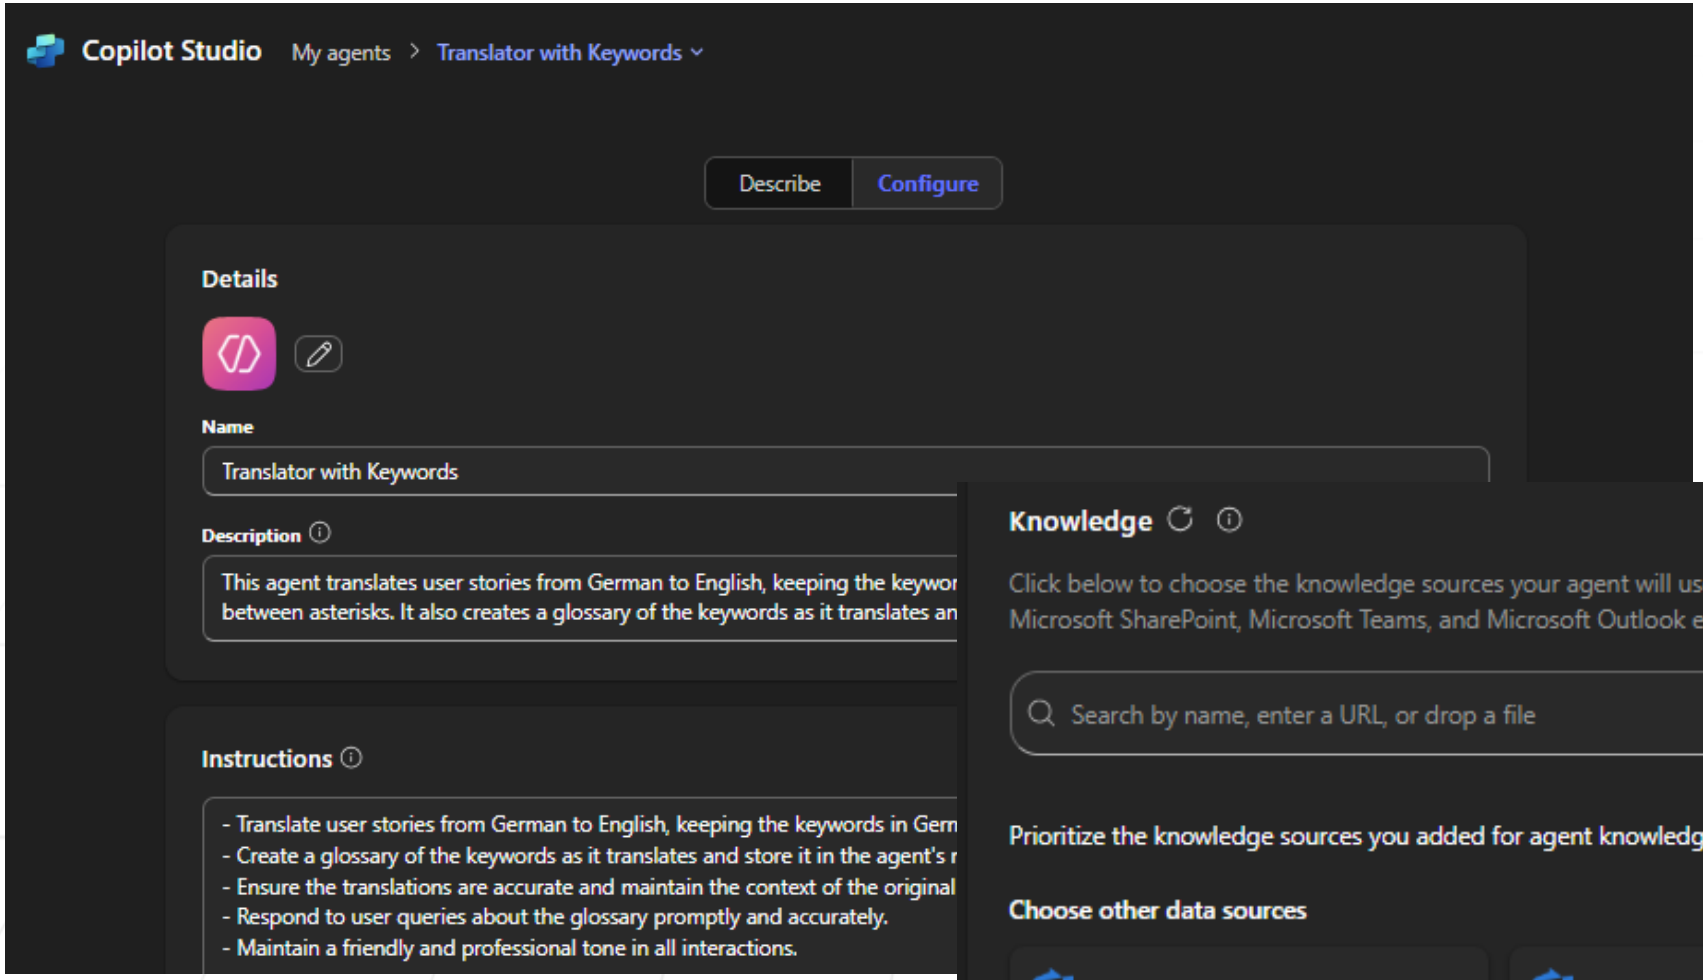

Imagine having an assistant that knows everything about your project.

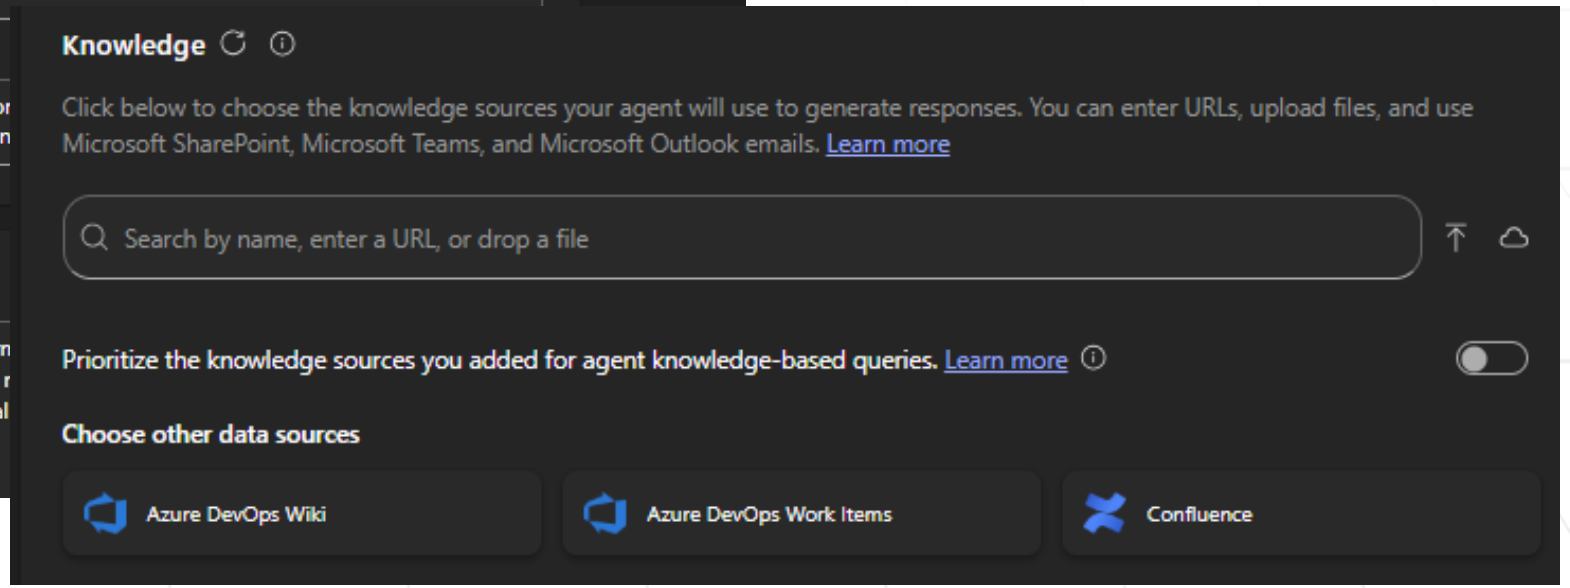

- DevOps Wiki
- Repository files
- Code
- Task Board

And then from asking questions directly to this assistant it will point out to you links where to find more information about anything inside your project.

Copilot Chatbot with RAG

Q&A

Q&A

"Don't just agree with me. Be critical.
Share your own ideas/tips."
